

Production of Secondary Atmospheres

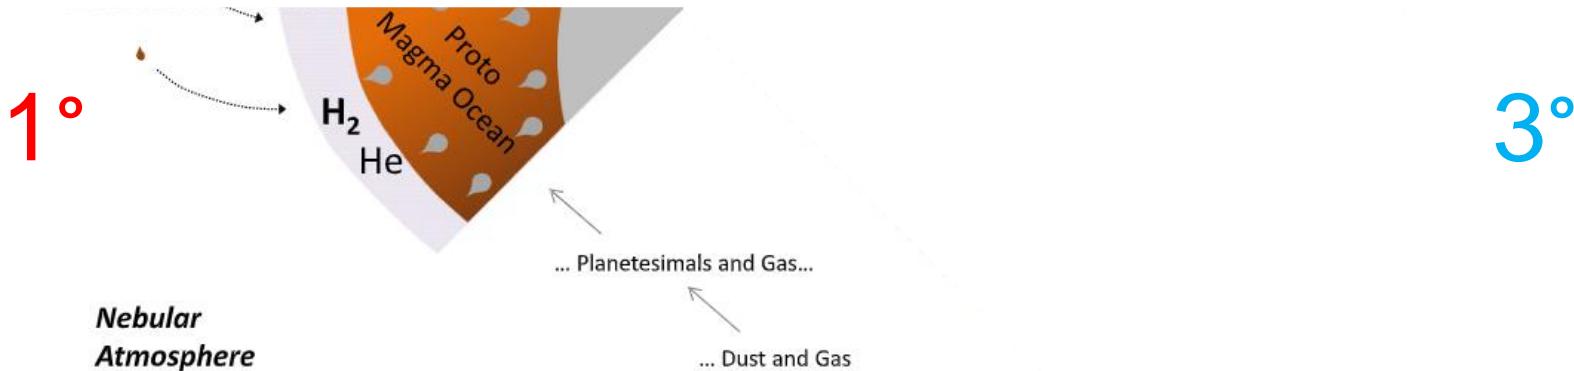

Prof. Dr. Paolo A. Sossi

Planetary lifecycle

2°

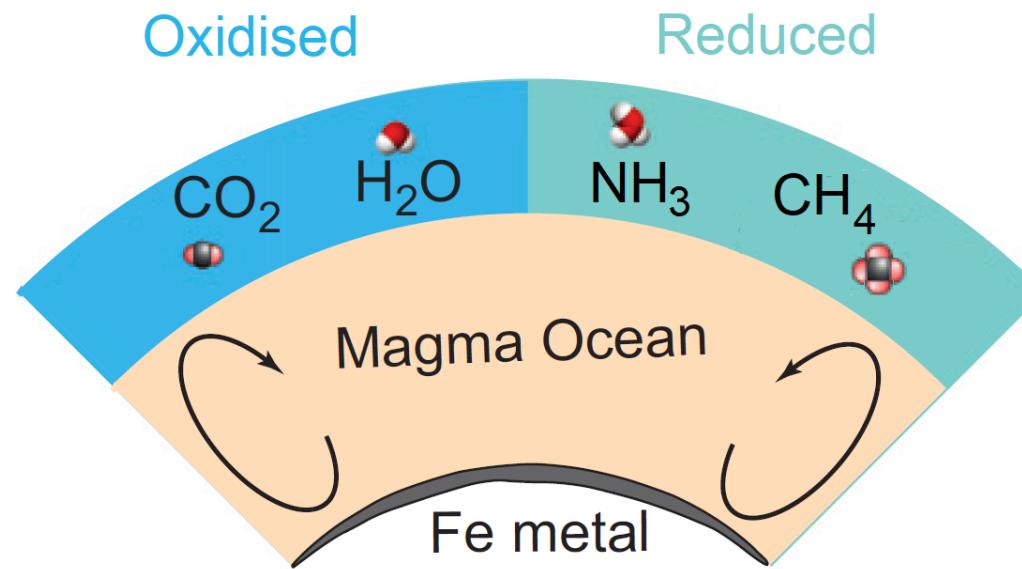

Gaillard and Scaillet (2014)

Why do they matter?

Secondary Atmospheres

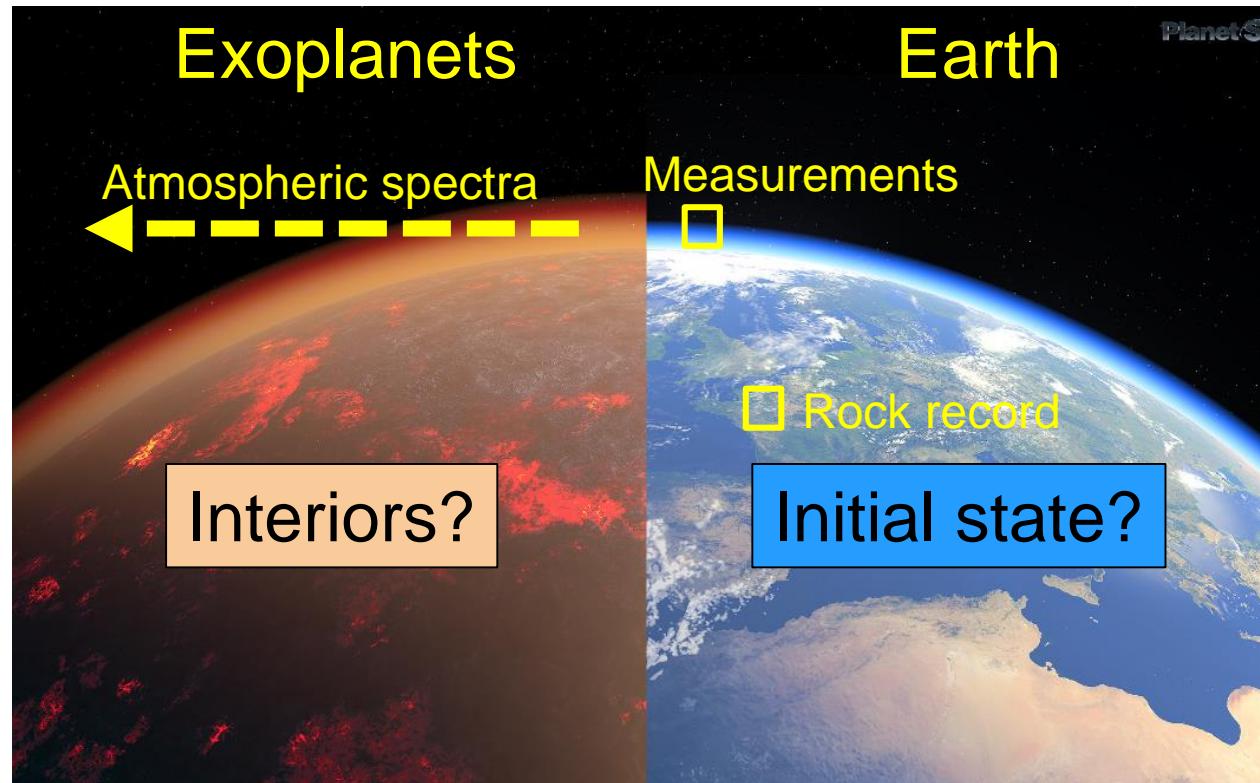

Type of atmosphere depends on precursor rocky material

What are planets made of?

What we need

Linking **atmospheres** and **interiors**

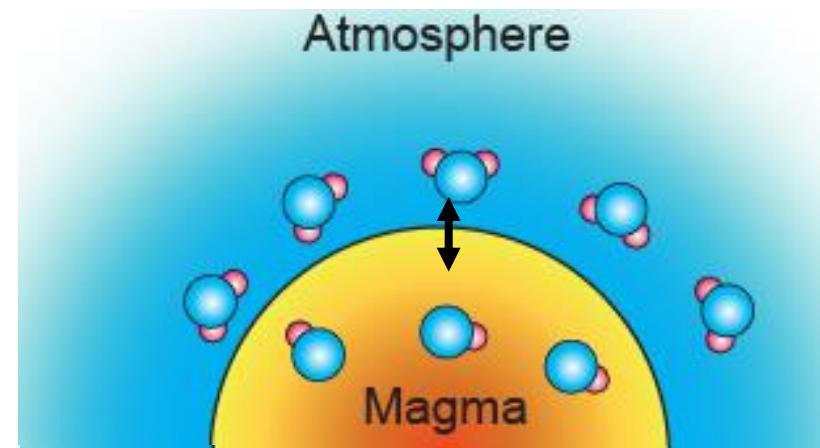

What are planetary atmospheres made of?

No studies on **compositions** and **temperatures** relevant to magma oceans

Dr. Maggie Thompson

Post-doc, June 2023

Dr. Dan Bower

U. Bern

$$X = \frac{\alpha P}{K}$$

Solubility Law

Mole fraction dissolved in melt

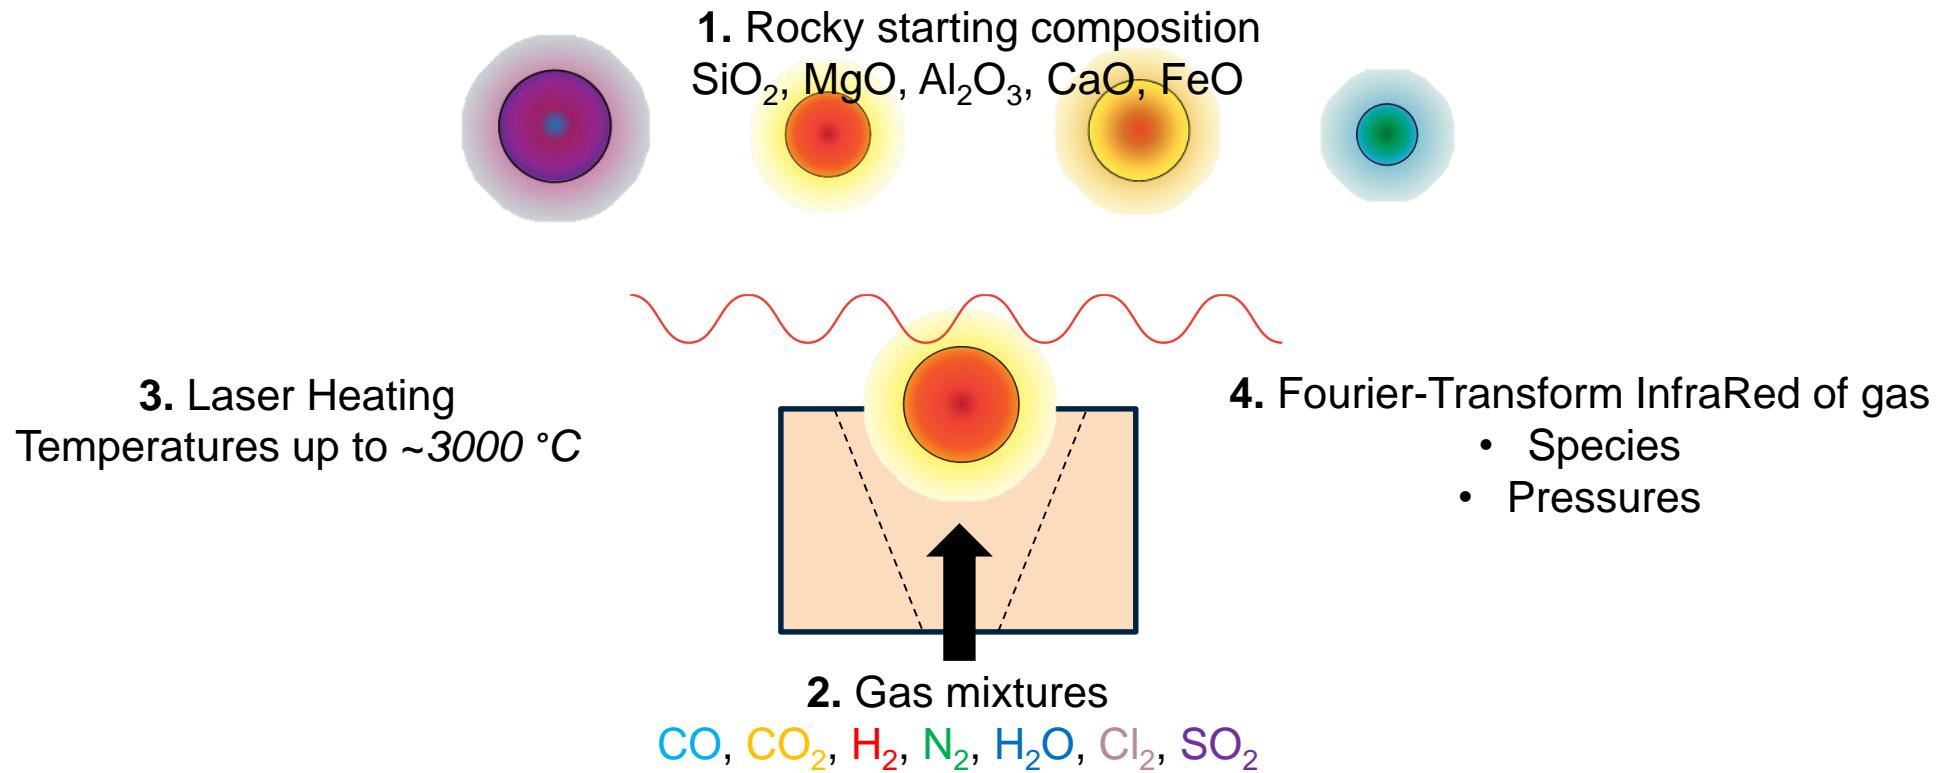

Stoichiometric coefficient

Partial pressure in atmosphere

Solubility constant

Quantify **volatile** solubilities in **growing planets**

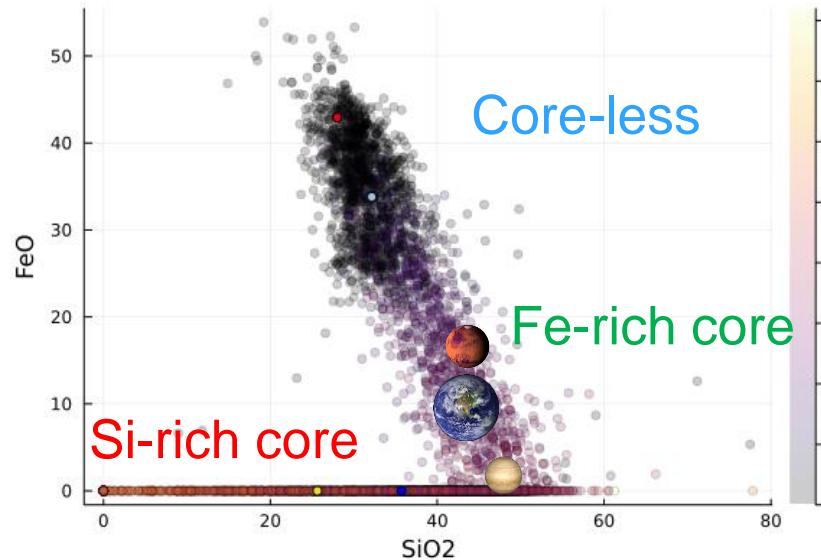

Create miniature rocky planets in the laboratory

What compositions do we need to study?

Planetary diversity

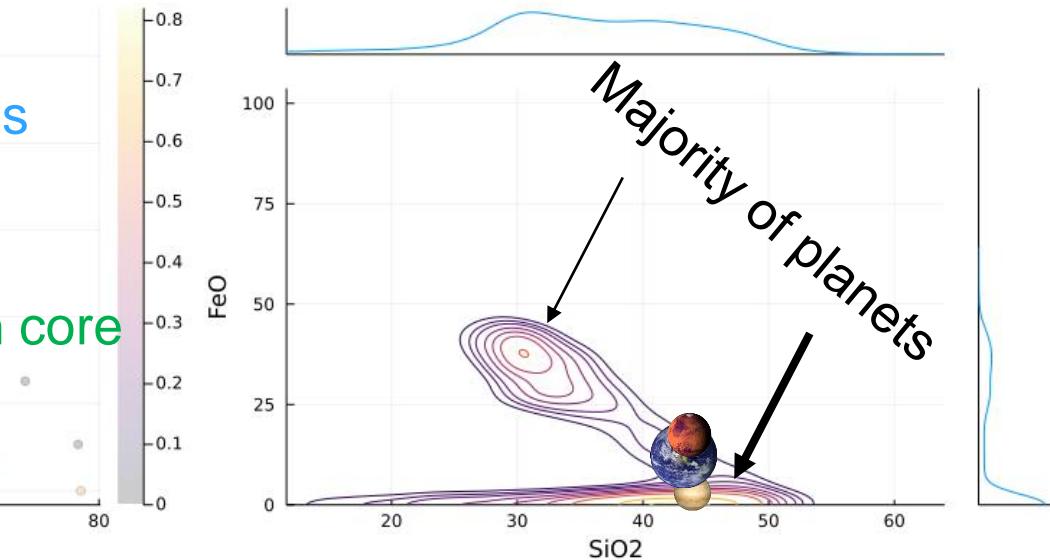

Use stars to estimate planet composition

Lukas Carmichael

Masters ETH

Dr. Kaustubh Hakim

KU Leuven/Brussels Obs.

Dr. Haiyang Wang

Post-doc, Sept. 2023

How do we verify our predictions?

Modelling lava world atmospheres

Fabian Seidler
(Ph.D. student since July, 2022)

1. Vaporise melt (VapoRock or MAGMA)

[Wolf et al. \(2022\)](#), Schaefer and Fegley (2004)

2. Atmospheric speciation (FastChem)

[Stock et al. \(2018\)](#)

3. Atmospheric structure & spectrum (HELIOS)

[Malik et al. \(2017\)](#)

Erik Meier

Dr. Simon Grimm

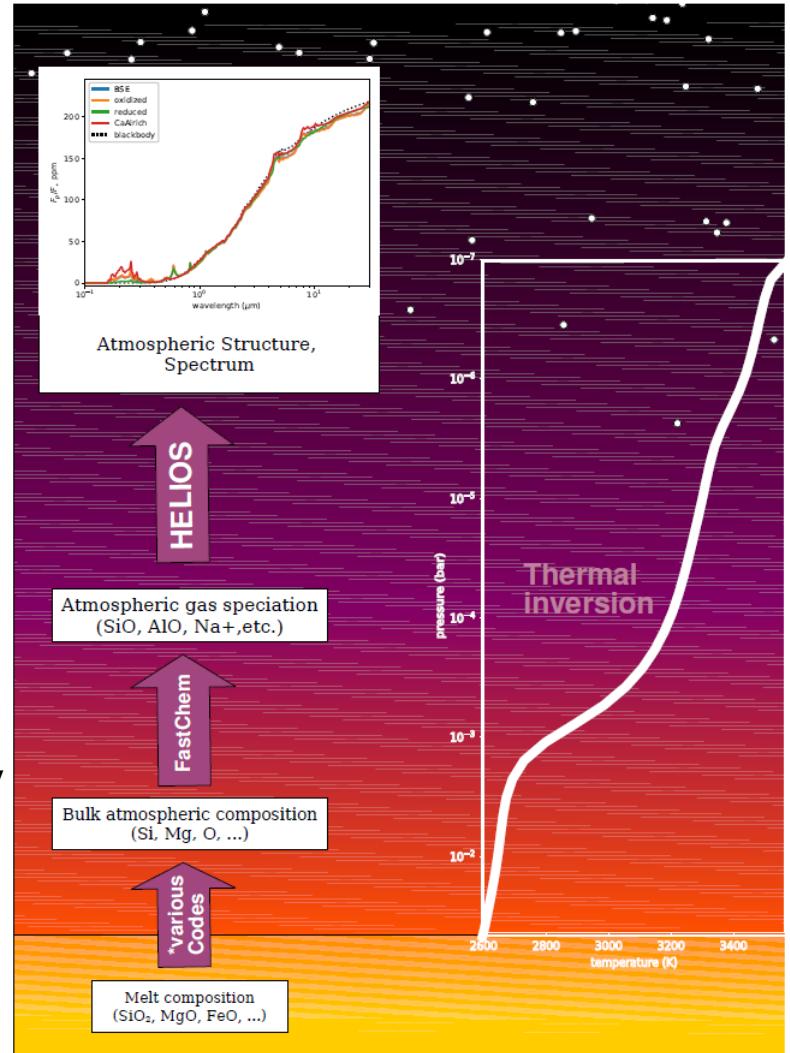

Ph.D. (U. Bern)

ETH

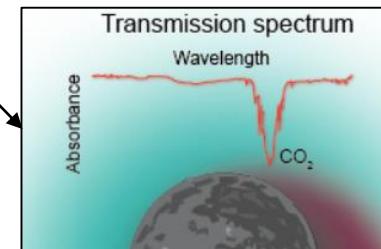

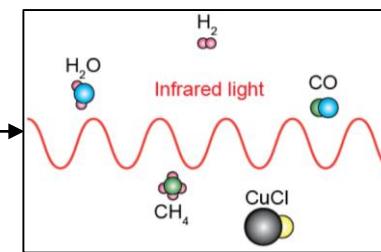

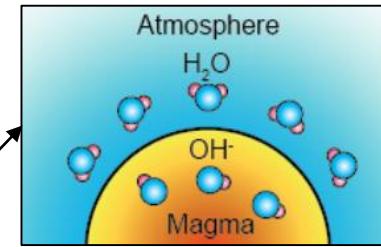

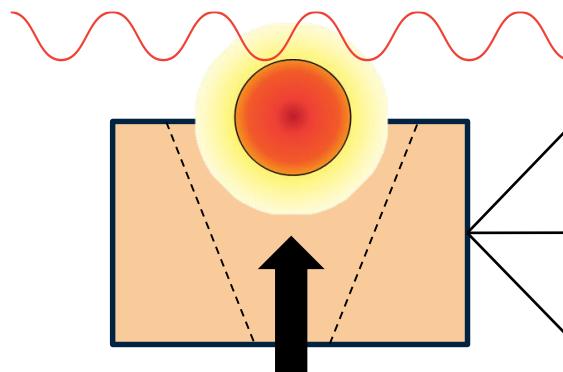

U. Bern

Approach

Laboratory measurements of
gas and melt

Implications

Volatile distribution

Pre-biotic chemistry

Exoplanet
compositions

ETHzürich
